

City of Naperville Smart Grid Initiative Project

- ❖ Complete automation of its electric grid**
- ❖ Add 57,323 smart meters**
- ❖ Install infrastructure necessary to support 2-way information flow between the utility and customer**

Project's Purpose

- ❖ Offer customers tools to control their energy consumption and costs using real-time feedback
- ❖ Enable greater reliability and demand response
- ❖ Provide peak/off-peak differentiated electric rates

Elements Will Create Savings Associated With

- ❖ **Direct Load Control**
- ❖ **2-way customer feedback**
- ❖ **Demand Side Management**
- ❖ **Time of Use and Critical Peak Pricing Rates**

Naperville Energy Smart Programs For Low-Cost, Reliable Electric Service

- ❖ **Provide Customers with tools to control their energy expenditures**
- ❖ **Reduce environmental impact through reduced demand and energy use**
- ❖ **Improve the efficiency of the distribution system**
- ❖ **Increase the reliability of service provided to customers**

Naperville will accomplish this by

- ❖ **Expanding its communications network**
- ❖ **Installing digital technology including Advanced Metering Infrastructure (AMI) and smart meters**
- ❖ **Automating its distribution grid**
- ❖ **Implementing Volt/VAR optimization to increase power quality**
- ❖ **Prepare the grid to support Plug-In Hybrid Vehicle (PHEV) intelligent charging**
- ❖ **Dynamic home energy consumption reduction, and customer feedback portals**

Existing Smart Grid Infrastructure Systems

- ❖ **Substation Automation (SA) by Siemens**
- ❖ **Distribution Automation (DA) by S&C**
- ❖ **System Control & Data Acquisition (SCADA) by ACS**
- ❖ **Service Request (SR) by Cityworks Azteca**
- ❖ **Customer Information System (GIS) by ESRI/Miner&Miner**
- ❖ **Workflow Technical Analysis Software by SynerGee Stoner and others**
- ❖ **File & Application Servers (FS/AS) by Microsoft and others**

Proposed Smart Grid Infrastructure Systems

- ❖ **Advanced Metering Infrastructure (AMI infrastructure, MDMS, HAN, and smart meters for all DPU-E customers)**
- ❖ **Asset/Workflow/Project Management System (AMS)**
- ❖ **Resource (Workforce) Management System (WFMS)**
- ❖ **Outage Management System (OMS)**
- ❖ **Energy/power quality Management Systems (EMS/PQ)**

Naperville Project

Plans to Complete Smart Grid

- ❖ Full AMI selection and deployment system wide
- ❖ 13 of 16 substations are already fully automated, with the remaining substations to be completed
- ❖ Fiber optic connectivity architected in a redundant ring between major distribution points
- ❖ Enabling Volt/VAR optimization to minimize power loss due to distribution inefficiency

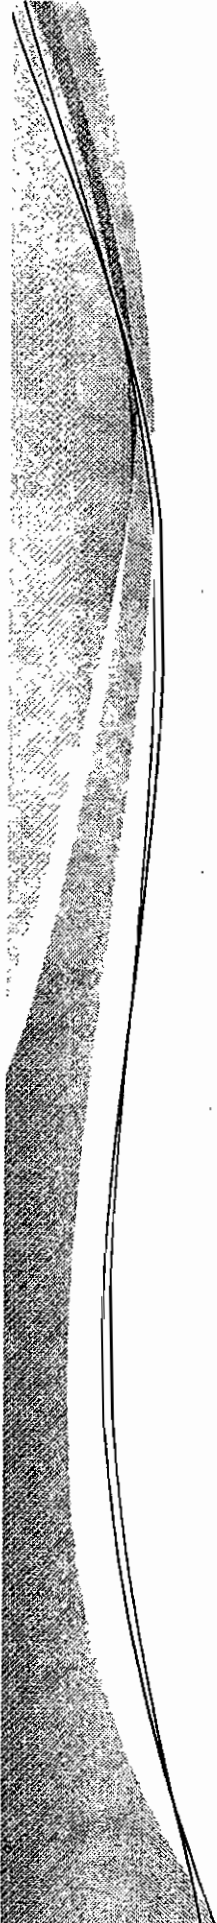

Naperville Project

Plans to Complete Smart Grid

cont'd

- ❖ **Implementing Customer portals for usage monitoring and timely access to service information**
- ❖ **Promotion of customer energy usage awareness programs**
- ❖ **Creation of voluntary in-home real-time energy consumption meter programs**
- ❖ **Engaging in substantial compliance with FERC energy standards, accepted accounting principles, OSHA safety regulations, and regular compliance monitoring**

Project will Reach all Electric Consumers in Naperville's Service Area

- ❖ Integrating 16 substations and 60 miles of distribution lines
- ❖ Purchasing \$11,651,000 of infrastructure and metering equipment
- ❖ Installing the latest electric grid software capable of engaging smart grid functions

During the Three Year Development Phase

- ❖ Naperville is requesting a 50% matching grant totaling \$10,994,000
- ❖ Over the course of 15 years, Naperville expects to spend \$1.81 for every \$1.00 requested from the DOE
- ❖ Estimates benefits of \$102,057,000 resulting in an overall \$80,698,000 in positive net cost/benefits
- ❖ Much of the project is “Shovel Ready” and approximately 90% of the funds will be expended by the end of 2011

Benefits of the Smart Grid Initiative

- ❖ Reduced meter data acquisition costs
- ❖ Streamlined customer billing and more advanced billing structures, including implementation time-of-use (TOU) and demand rates
- ❖ Remote disconnects/reconnects
- ❖ Increased billing accuracy
- ❖ Outage and/or emergency notifications to the in-home display
- ❖ Home area network (HAN), including smart thermostats, in-home displays, smart appliances, etc.

Benefits of the Smart Grid Initiative

cont'd

- ❖ **Decreased outage response with instant, relevant information from the smart meters**
- ❖ **Power quality optimization for individual customers and system voltage adjustments to optimize efficiency and reduce losses**
- ❖ **Decrease outage times with deployment of Distribution Automation (DA) automated switches**
- ❖ **Implementation of a uniform asset management system as utility transitions from new deployment to maintenance**

Benefits of the Smart Grid Initiative

cont'd

- ❖ Implementation of a workflow/project management system to tie into the asset management system for streamlining of workflow practices and reduction in paperwork and redundancy
- ❖ Upgrade of the fiber optic nodes (JungleMux) to cover today's needs and future applications such as VOIP, substation and Citywide security, etc.
- ❖ Upgrade of the SCADA system with the provision of more data, securely, with less delay.
- ❖ Additional data for engineering studies and projects to modify and/or upgrade the electric grid.

Conclusions on Smart Grid Technology

- ❖ Allows Naperville to keep its reliability of electrical service
- ❖ Self-heals electric grid and optimizes use of human resources. Linemen are dispatched only to area where automation can not help resolve the problem
- ❖ Allows real-time access to substation and distribution infrastructure for operational efficiency and infrastructure security
- ❖ Completion of AMI will allow real time access to customer connection point that will support future energy conservation effort, real-time pricing, time-of-use rates and enables smart home controls
- ❖ Robust, scalable, and secure communication network supports present and future steps in Smart Grid technology
